Application/Control Number: 09/966,754

Art Unit: 2813

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 4-5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 of U.S. Patent No. 6,297,096. Although the conflicting claims are not identical, they are not patentably distinct from each other because "oxidizing a top oxide layer", and "oxidizing a portion of the top oxide layer" appear to be obvious.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 09/966,754

Art Unit: 2813

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 4-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Hayabuchi – US 5,324,675.

Hayabuchi (Figs. 1-4 and text in col. 3, line 51 to col. 5, line 26) discloses the claimed invention to improve memory characteristics by fabricating an ONO layer in a memory cell having a bottom oxide, depositing a nitride layer where the thickness is controlled as shown at col. 3, lines 61-65, and oxidizing the nitride layer which inherently introduces oxygen into the nitride layer (note applicant's specification on page 8, lines 5-6).

Claims 1, 4-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Chang – US 5,836,772.

Chang (Figs. 1-3 and text in col. 4, line 16 to col. 6, line 21) discloses the claimed invention to improve charge retention by fabricating an ONO layer in a memory cell having a bottom oxide, depositing a nitride layer where the thickness is controlled as shown at col. 4, lines 54-67, and introducing oxygen into the nitride layer as shown at col. 5, lines 11-20.
